VALUES

QUALITY

and productivity in good balance. Constantly improving methods and ensuring processes in cooperation with clients.

PROFITABLE BUSINESS

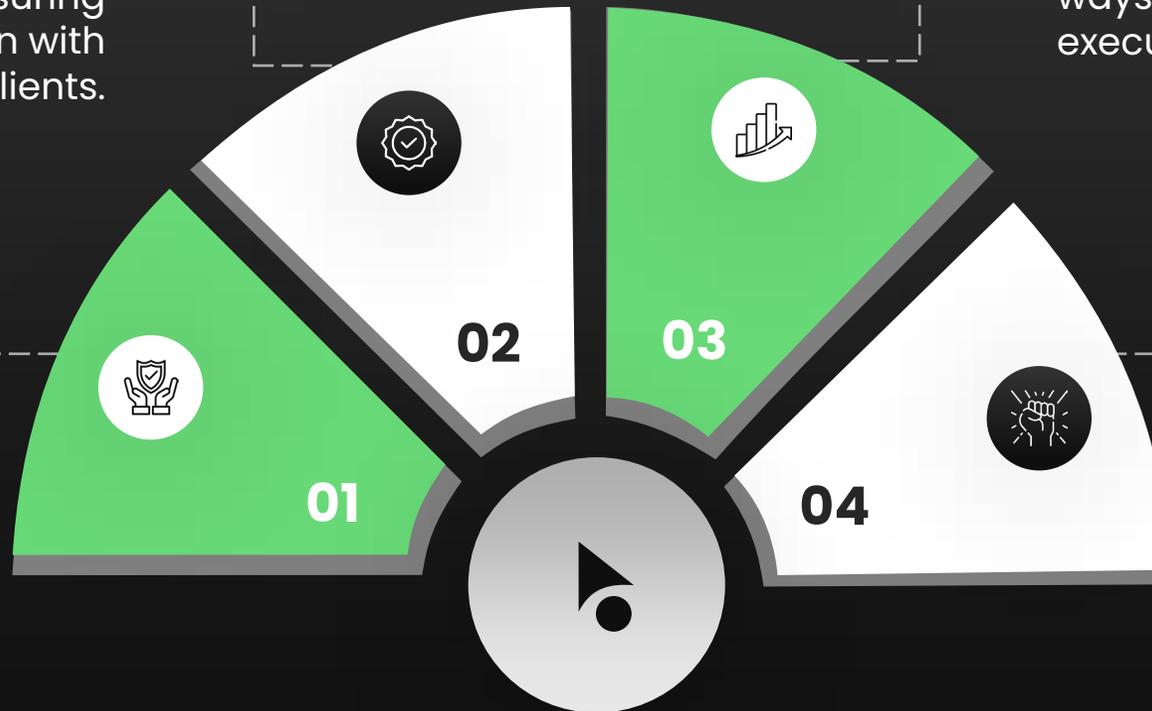

is the foundation for sustainability and R&D. New ways of thinking when executing projects.

SAFETY

In everywhere and everything what we do. Zero accidents and safety-oriented staff and projects.

COURAGE

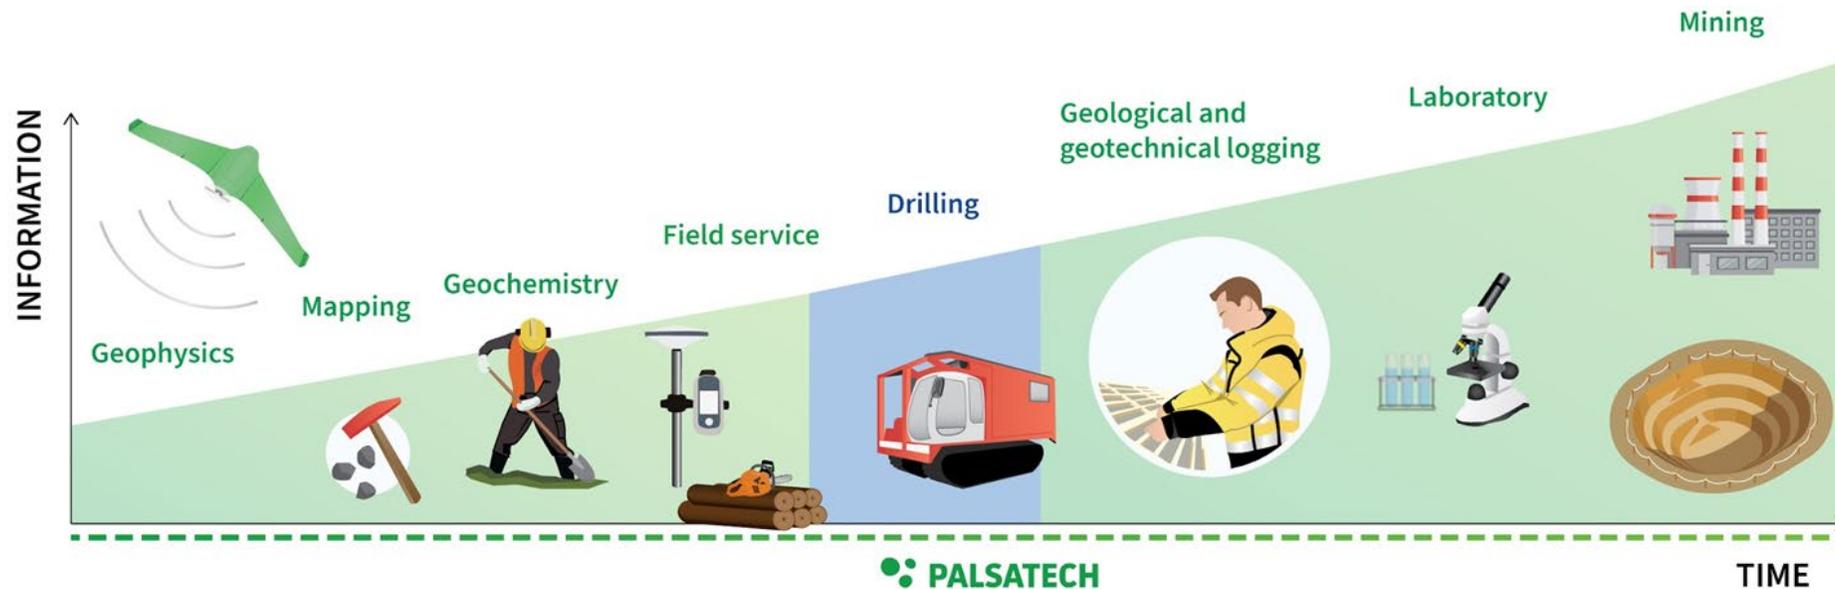

to try new things (and even sometimes fail while trying). Learning from the past and developing the industry.

OUR SERVICE CONCEPT

Partnering with Palsatech means accessing a full spectrum of expertise, methodologies, infrastructure, and equipment—all conveniently available under one roof. With our support, there's no need to invest in facilities, equipment, or additional staff, nor do you need to spend excessive time managing the exploration project. This enables you to save money and focus on what matters most – developing the project.

We also work in close cooperation with multiple partners across Europe. Thanks to our expansive partner network, we're equipped to offer a vast spectrum of services – from geophysical services and drilling to laboratory analyses.

PALSACENTER CONCEPT

Your company can send samples to our service centers where our geologists and technicians take care of them. It is also possible to rent a private hub, where you can work undisturbed and get our help when needed.

Geological Samples

- Drill core, rejects, pulps, hand samples, overburden...
- Some people love them, some hate them
- Some people even sleep next to the core
- Some companies don't have the necessary space to store samples
- Some companies have a few pallets to store, others have thousands

Samples – the only thing that remains when project ends if ...

- Keep dry, avoid direct sun light
- Cold is ok, since no water available

When things have not been done properly – Case Pahtavaara

Together with Rupert Resources, we were able to save a lot of samples (~600 pallets) –still many meters were dumped –lost information

Can create significant costs for the future or the next player

*' From the earth you came
and to the earth you belong..'*

When things have not been done properly – boxes and pallets

Several projects where boxes and pallets needs to be changed

Mold and fungus can create a risk when changing boxes-PPE

' From the earth you came and to the earth you belong..'

Know your storage!

Inventories take a lot of space and not nice to do outdoors

Takes a lot of time to find samples if the storage database is not accurate → costs

Pallets, containers, collars

Safe storage

Avoid loose collars in long term storage

Pallets, containers, collars...

Rejects and pulps can be stored safely
in tailor made sample containers

Safe way to send a batch to lab
analysis

Our solution

We can offer a capex free option to safely store samples in short term or long term. We can offer a temporary solution for changing environment or be a final solution all the way up to the point when samples are delivered to the National Archive

We warmly welcome even one pallet or truck loads—all stay under the same roof
